

Project Labor Agreements (PLAs)

December 2015

Background:

On February 6, 2009, President Obama signed [Executive Order 13502](#) titled “[Use of Project Labor Agreement for Federal Construction Projects](#).” This Executive Order encourages executive agencies to consider requiring the use of PLAs on large-scale direct Federal construction projects (defined as a project with a total cost of \$25 million or more). Specifically, section 3 allows agencies to require the use of a PLA in Federal contracts where such use will: “. . . (i) advance the Federal Government’s interest in achieving economy and efficiency in Federal procurement, producing labor-management stability, and ensuring compliance with laws and regulations governing safety and health, equal employment opportunity, labor and employment standards, and other matters, and (ii) be consistent with law.” By its terms, section 3 applies only to Federal procurement, not contracts awarded under Federal financial assistance programs. With respect to projects receiving Federal financial assistance, section 5 provides, “This order does not require an agency to use a project labor agreement on any construction project, nor does it preclude the use of a project labor agreement in circumstances not covered by the order, including leasehold arrangements and projects receiving Federal financial assistance.” Section 7 directs OMB, within 180 days of the date of the Executive Order, to issue recommendations with respect to the use of PLAs in construction contracts receiving Federal financial assistance.

The order also revokes two Executive Orders that were issued by the previous Administration (Executive Order 13202 of February 17, 2001, and Executive Order 13208 of April 6, 2001) and directs agencies, to the extent permitted by law, to revoke any orders, rules or regulations implementing Executive Orders 13202 and 13208.

Current Status:

The FHWA is implementing the Executive Order through guidance issued on May 7, 2010.

The following is a summary of all Federal-aid projects for which a PLA has been approved after May 7, 2010, by the Division Office for use in that State. Refer to Tables A and B for additional information on these projects.

<u>State</u>	<u>No. Approved PLAs</u>
California	10
Connecticut	1
Illinois	296
City of Chicago	58
Massachusetts	3
Minnesota	9
New York	6
Total	<u>383</u>

Talking Points:

- On May 7, 2010, the FHWA issued the memorandum "[Interim Guidance on the use of Project Labor Agreements](#)." FHWA had anticipated additional guidance on implementation for Federal assistance programs from OMB, but no additional guidance has been issued. A State DOT may be approved to use a PLA if they have made a reasonable showing that the use of a PLA on a project will advance the interests of the government, and it is structured in a manner so as to be effective in securing competition, as required in 23 U.S.C. 112.

On July 14, 2009, the Federal Civilian Agency Acquisition Council issued a notice of proposed rulemaking to amend the FAR to implement EO 13502. There were approximately 960 comments received regarding this proposed rule. On April 13, 2010, the final rule was issued and the proposed modifications to the FAR became effective on May 13, 2010.

- In September/October 2009, the Department of Labor issued an advertisement for bids for the construction of a \$35 million 160,000 square foot Job Corps Center in Manchester, NH. The project included a requirement that the winning contractor negotiate and enter into a PLA. A contractor filed a bid protest with GAO alleging a violation of the Competition in Contracting Act. The contractor's bid protest was supported by the Association of Builders and Contractors. On November 11, the DOL withdrew the advertisement for the project citing the need to reevaluate the issues involved in the PLA requirement.
- An opinion from the FHWA Chief Counsel's office indicates that the Executive Order's authorization to use a PLA on a large scale construction project applies to direct Federal procurement, but not to Federal assistance programs such as the Federal-aid highway program. However, while not specifically addressing whether a PLA should be used in Federal assistance programs, the order notes that it does not preclude the use of a PLA in these circumstances.
- Typically, PLAs require construction contractors to enter into pre-hire collective bargaining agreements with local unions to set certain hiring, payment and working conditions for all workers for the duration of the contract. The mandatory use of a PLA effectively places contractual requirements on the prime contractor and subcontractors that are typically met by union contractors, but which would not apply to non-union contractors. Non-union contractors state that such labor agreements are not necessary as the US Department of Labor requirements for prevailing wages, construction safety, and contract work hours already provide sufficient employee protection.
- The chief advantage generally cited in support of a PLA is that they guarantee labor harmony by including a no-strike/no-lockout provision.
- Historically, industry associations such as the Associated General Contractors of America (AGC) and the Associated Builders and Contractors (ABC) have opposed PLAs as the requirement for a union agreement limits or precludes non-union contractors from bidding or participating in the contract. AGC and ABC believed that the mandatory use of PLAs conflicts with existing FHWA policy by placing restrictions

on the competitive bidding process, by limiting the contractor's selection of employees, by functioning as a geographic hiring preference and by limiting the ability of non-union firms to compete.

- Many minority and Disadvantaged Business Enterprise (DBE) contractors believe that PLAs are noncompetitive and discriminatory. Historically, many of these firms have been non-union companies who believe that PLAs prevent small businesses and minority owned firms from competing for publicly funded construction contracts. The National Association of Minority Contractors (NAMC) reported that the use of PLAs by the City of Philadelphia would mean that 80 percent of the construction work force in the Philadelphia area will be barred from participating because they have chosen not to join a union. [NAMC's web page](#) indicates that ninety-eight percent of black-owned construction companies are nonunion, and thus a contracting agency's requirement for all contractors and subcontractors to agree to the terms of a PLA presents a significant barrier to many minority and small non-union contractors.

While the use of PLAs does not prevent non-union contractors from bidding or providing subcontract quotations, associations such as the NAMC and other small, open-shop groups believe that the use of PLAs will limit competition, drive up prices and limit the availability of DBEs on Federal-aid projects.

A Brief History of PLAs, Executive Orders and Transportation Programs:

- On June 5, 1997, President Clinton issued a memorandum to the Heads of Executive Departments and Agencies on the "Use of Project Labor Agreements for Federal Construction Projects."
- On April 22, 1998, Transportation Secretary, Rodney Slater issued a directive to each USDOT operating mode that ". . . strongly encourage each operating administration to authorize and promote the use of project labor agreements by its financial assistance recipients for DOT-assisted construction projects, consistent with underlying legal authorities."
- On May 27, 1999, the FHWA issued guidance on the types of factors that should be considered in determining whether a PLA should be used.
- On February 17, 2001, President George W. Bush signed Executive Order 13202 titled "Preservation of Open Competition and Government Neutrality Towards Government Contractors' Labor Relations on Federal and Federally Funded Construction Projects." This Executive Order essentially revokes the Clinton memorandum and prohibits owners from requiring PLAs on Federally assisted construction projects.
- April 2001 President Bush amended his directive to exempt projects with a PLA established before his 2/17/01 executive order. Executive Order 13208 provides additional guidance on existing PLAs that are not subject to Executive Order 13202.
- On October 5, 2001, the FHWA issued the "PLA Standards" guidance on the types of factors the FHWA would consider in order to find the use of a PLA to be more cost

effective, as provided under 23 USC 112 whenever a method other than competitive bidding is used.

- The [FHWA's December 7, 2001 decision](#) determined that Maryland SHA failed to demonstrate that its request for the use of a PLA was justified under the PLA Standards that were issued by FHWA on October 5, 2001. These standards were based on the competitive bidding principles in 23 USC 112 and FHWA's implementing regulations in 23 CFR Part 635.
- On July 12, 2002, the DC Circuit Court of appeals upheld the legality of Executive Order 13202 overturning a DC Federal District Court decision that enjoined the enforcement of the Order.
- On February 6, 2009, President Obama signed an Executive Order titled "Use of Project Labor Agreement for Federal Construction Projects." This encourages executive agencies to consider requiring the use of PLAs on large-scale direct Federal construction projects with a total cost of \$25 million or more.
- On May 7, 2010, the FHWA issued the memorandum "[Interim Guidance on the use of Project Labor Agreements.](#)"

Overview of USDOT / FHWA PLA Implementation Policies that Supported PLAs:

- To support President Clinton's June 5, 1997 memorandum, the USDOT General Counsel and Assistant Secretary for Transportation Policy, on March 19, 1999, issued a memorandum transmitting a document titled "Guidance on the Use of Project Labor Agreements (PLAs) on Federal Construction Projects and DOT-Assisted Construction Projects." Essentially, the guidance allowed the modes to use PLAs on a case-by-case basis where the PLA would ". . . advance the recipient's procurement interest and DOT's interest in cost, efficiency, and quality, and in promoting labor-management stability as well as compliance with applicable legal requirements, governing safety and health, equal employment opportunity, labor and employment standards, and other matters."
- FHWA's Program Manager for Infrastructure's May 27, 1999 memorandum implemented Secretary Slater's April 22, 1998 directive memorandum and the President's June 5, 1997 memorandum encouraging the use of PLAs. Specifically, the guidance in this memorandum provided that, prior to authorizing a PLA each FHWA Division Administrator was required to determine that:
 1. *"The use of a PLA is consistent with Federal, State, and local statutory and regulatory requirements.*
 2. *The requirements for a PLA can be stated so as to assure the opportunity for free and open competitive bidding.*
 3. *Past experience with construction projects in the location where the project will be performed indicates that a PLA will:*
 - (1) *Advance the Government's interest in reducing overall construction costs, improving efficiency, and enhancing equality, and*

- (2) Promote labor-management stability as well as compliance with applicable health and safety, equal opportunity and labor and employment standards.*
- 4. There is a probability of labor related delays in performance of the construction contract which would have a significant adverse impact on the mission of the Federal-aid recipient or operation of the facility.*
 - 5. The labor organizations can provide a reliable source of skilled, experienced workers in all crafts needed on the job site for the duration of the project (taking into consideration other major construction work in the area).*
 - 6. The influence of organized labor in your State is such that the project would benefit from uniform work rules and working conditions and established procedures for resolving labor disputes with no strike/no lock-out protections.”*
- In January 2001, Maryland DOT submitted a request to use a PLA on the Woodrow Wilson Bridge project. FHWA subsequently denied the request following the issuance of Executive Order 13202. After the U. S. District Court for the District of Columbia issued a preliminary injunction enjoining the FHWA from enforcing Executive Order 13202, Maryland DOT renewed its PLA request on August 20, 2001. On October 5, 2001, the FHWA issued PLA standards (based on 23 USC and 23 CFR requirements). These “standards” were criteria based on the competitive bidding requirements in 23 USC 112 and FHWA’s implementing regulations in 23 CFR 635. The FHWA used these standards in reviewing and disapproving Maryland DOT’s request in a decision document dated December 7, 2001.
